## GP23 David Cooper, Wells on Sea, Norfolk (origin uncertain: possibly knitted in Sheringham or by a Scottish fisher lass)

■ = purl stitch on the right side (knit stitch on the wrong side)

Tension = 10 stitches to the inch. There is no pattern repeat.

Martin Warren (martin.warren@talktalk.net)

Original gansey: CRRMU: 1986.2

Version 1.1 : 24.11.2019 Status: verified

The two alternating columns could be termed 'A' for the regular Betty Martin and 'B' for the irregular chequerboard. The groups of purl tetrads (groups of 4 in a square) up the entire yoke for column 'B' are as follows: quincunx (group of five tetrads), blank, down chevron (three tetrads in a triangle pointing downwards), up chevron, a pair, up chevron, quincunx, blank, down chevron, blank, quincunx, singleton, down chevron, down chevron, blank, quincunx, blank, quincunx, blank, quincunx, blank, quincunx.

It is not certain whether the irregular nature of column B is deliberate or sloppy knitting.

I have charted what I think is an error exactly as I saw it: the first down chevron (greyed out) begins on row 10 when you might expect it to start on row 9 but the interval between chevrons is then corrected by having only a single plain row (row 14) where you might expect to see 2. But then again, maybe it was deliberate.

## Terminology:

A purl tetrad (group of four purls in a square)

A quincunx (group of five tetrads)

An up chevron

A down chevron

Version 1.1 : 24.11.2019 Status: verified

GP23 version 1.1: Test swatch by Val Smith. Signature 4-ply wool, 2 mm needles with a shield.
